Texas Instruments  
Dallas, TX 75243

To whom it may concern,

I am excited to apply for the Software Engineer intern position at Texas Instruments, a world leader in embedded processing and semiconductor innovation, which excites me.

As a University of Central Florida student studying computer science, I have developed a solid foundation in C, C++, and JavaScript through courses and practical projects, such as creating web-based tools and command-line apps. My enthusiasm for resolving challenging issues and my background in designing scalable, effective code complement TI's objective of developing technology that improves the world.

I have practical expertise with HTML, CSS, C, Python, and JavaScript, among other programming languages. My education has improved my technical problem-solving skills while fostering teamwork and creativity, as has my active participation in the National Society of Black Engineers (NSBE) and the AI UCF Club. These organizations have inspired me to keep working on my portfolio and looking for chances to use my ideas.

Along with my educational background, my work as a Sales Associate at Michael Kors has given me invaluable communication and customer service abilities. I gained knowledge on how to interact with a wide range of customers, support brand campaigns, and remain professional in a hectic setting. I've gained flexibility and a strong work ethic from this experience, which I know will aid your team.

The ability to use my technological expertise on practical projects, especially in the software development and gaming industries, is what most excites me about this opportunity. Along with my talents, I'm excited to share my desire to learn new technologies, advance as a developer, and collaborate on worthwhile projects.

Thank you

407-123 - 4567

Sincerely,

Davidson Saintelus
